

# Safety Data Sheet

According to Regulation (EC) No 1272/2008  
Revision 3: 09/06/2021

## SECTION 1. PRODUCT/ MIXTURE AND COMPANY IDENTIFICATION

### *1.1 Product Identifier*

|                                      |                 |
|--------------------------------------|-----------------|
| <b>Product name</b>                  | BLANCONE® STICK |
| <b>Other means of identification</b> | Not Available   |

### *1.2 Details of the supplier of the safety data sheet*

|                              |                                                   |
|------------------------------|---------------------------------------------------|
| <b>Manufacturer/Supplier</b> | IDS SpA                                           |
| <b>Address</b>               | Via S. Cristoforo 28/10 – 17100 Savona -<br>Italy |
| <b>Telephone</b>             | +39.019.862080,                                   |
| <b>Fax</b>                   | -                                                 |
| <b>Website</b>               | -----                                             |
| <b>Email</b>                 | info@idsdental.it                                 |
| <b>Emergency Telephone</b>   | +39.019.862080                                    |

### *1.3 Description of the Product*

BLANCONE® STICK is a pen for teeth bleaching. The first use is performed in office by dentist and afterwards the user continuous the application in home according to the instructions of dentist.

## SECTION 2. HAZARDS IDENTIFICATION

### *2.1 Classification of the substance or mixture*

**Hazardous mixture according to directive (EC) No 1272/2008.  
Not classified as Dangerous Goods for transport purposes.**

|                                                                           |                                                             |
|---------------------------------------------------------------------------|-------------------------------------------------------------|
| <b>Classification according to regulation (EC) No 1272/2008 [CLP] [1]</b> | <b>Eye Irritation Category 2</b>                            |
| [1]                                                                       | Classification drawn from EC Directive 1272/2008 - Annex VI |

### *2.2 Label element(s)*

CLP label element  
Pictogram GHS07

**SIGNAL WORD**

**WARNING**

**Hazard statement(s)**

**H319 H315**

Causes serious irritation on eye and skin

**Supplementary statement(s)**

# Safety Data Sheet

According to Regulation (EC) No 1272/2008

Revision 3: 09/06/2021

Not Applicable

## **Precautionary statement(s) Prevention**

**P280**

Wear protective gloves/protecting clothing/eye protection/face protection

## **Precautionary statement(s) Response**

**P305+P351+P338**

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

**P337+P313**

If eye irritation persists: Get medical advice/attention.

## **Precautionary statement(s) Storage**

|      |                                  |
|------|----------------------------------|
| P273 | Avoid release to the environment |
|------|----------------------------------|

## **Precautionary statement(s) Disposal**

|      |                                                                                 |
|------|---------------------------------------------------------------------------------|
| P501 | Dispose of in compliance with governmental regulation. (EC1975L0442-10/11/2003) |
|------|---------------------------------------------------------------------------------|

## **2.3 Other hazards**

Cumulative effects may result following exposure\*.

May produce skin discomfort\*.

**REACH** - Art.57-59: The mixture does not contain Substances of Very High Concern (SVHC) at the SDS print date.

## **SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

### **Description**

Bleaching gel for application on the teeth.

### **3.1 Substances**

See section 3.2

### **3.2 Mixtures/ Chemical characterization**

Mixture of carbamide peroxide, glycerine and propylene glycol

## **SECTION 4. FIRST AID MEASURES**

### **General information**

The intended use is for application for the patient at dental office or at home under dentist supervision and directions.

### **Skin contact**

Immediately rinse with a lot of water.

### **Eye contact**

Rinse opened eye for several minutes under running water. Then consult a doctor.

### **After swallowing**

No risk at small doses at intended use. Rinse out mouth and then drink plenty of water. In case of high dose consult doctor.

## **SECTION 5. FREFIGHTING MEASURES**

### **Suitable extinguishing agents**

Water spray. Use fire extinguishing methods suitable to surrounding conditions.

### **For safety reasons unsuitable extinguishing agents**

Water with full jet, CO<sub>2</sub>

### **Protective equipment**

No special measures.

## **SECTION 6. ACCIDENTAL RELEASE MEASURES**

### **Person-related safety precautions**

Wear protective equipment. Keep unprotected persons away. Dilute with plenty of water.

### **Measures for cleaning/collecting**

Absorb with liquid-binding material (sand, diatomite, acid binders, universal binders, sawdust).

### **Measures for environmental protection (see section 12)**

Dispose contaminated material as waste according to item 13.

## **SECTION 7. HANDLING AND STORAGE**

### **Handling**

#### **Safe Handling**

- Avoid all personal contact, including inhalation.
- Wear protective clothing when risk of exposure occurs.
- Use in a well-ventilated area.
- Prevent concentration in hollows and sumps.
- DO NOT enter confined spaces until atmosphere has been checked.
- DO NOT allow material to contact humans, exposed food or food utensils.
- Avoid contact with incompatible materials.
- When handling, DO NOT eat, drink or smoke.
- Keep containers securely sealed when not in use.
- Avoid physical damage to containers.
- Always wash hands with soap and water after handling.
- Work clothes should be laundered separately. Launder contaminated clothing before re-use.
- Use good occupational work practice.
- Observe manufacturer's storage and handling recommendations contained within this SDS.
- Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions are maintained.

#### **Information about fire - and explosion protection**

Ensure good ventilation/exhaustion at the workplace. No special measures required.

### **Storage**

#### **Requirements to be met by storerooms and receptacles**

Store in dry and well-ventilated area at 5°C to 25°C. Avoid the direct contact with light and heat.

#### **Information about storage in one common storage facility**

- Store away from flammable substances.
- Store away from reducing agents.
- Store away from metals.

#### **Further information about storage conditions**

- Keep receptacle tightly sealed.
- Protect from heat and direct sunlight.
- Store in a cool place.
- Heat will increase pressure and may lead to the receptacle bursting.

## SECTION 8. EXPOSURE CONTROLS/ PERSONAL PROTECTION

### General protective measures

Avoid contact with eyes and skin

### Hygienic measures

Immediately remove all soiled and contaminated clothing

| <b>8.1 Control parameters</b> |                  |                       |                     |                      |
|-------------------------------|------------------|-----------------------|---------------------|----------------------|
| <b>Exposure limits (EH40)</b> |                  |                       |                     |                      |
| <b>CAS No</b>                 | <b>Substance</b> | <b>TEEL-1*</b>        | <b>TEEL-2*</b>      | <b>TEEL-3*</b>       |
| -                             | Urea peroxide    | 1.2 mg/m <sup>3</sup> | 13mg/m <sup>3</sup> | 79 mg/m <sup>3</sup> |

\***TEEL-3** is the airborne concentration (expressed as ppm [parts per million] or mg/m<sup>3</sup> [milligrams per cubic meter]) of a substance above which it is predicted that the general population, including susceptible individuals, when exposed for more than one hour, could experience life-threatening adverse health effects or death.

\***TEEL-2** is the airborne concentration (expressed as ppm or mg/m<sup>3</sup>) of a substance above which it is predicted that the general population, including susceptible individuals, when exposed for more than one hour, could experience irreversible or other serious, long-lasting, adverse health effects or an impaired ability to escape.

\***TEEL-1** is the airborne concentration (expressed as ppm or mg/m<sup>3</sup>) of a substance above which it is predicted that the general population, including susceptible individuals, when exposed for more than one hour, could experience notable discomfort, irritation, or certain asymptomatic, nonsensory effects. However, these effects are not disabling and are transient and reversible upon cessation of exposure.

## SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

### BLANCONE STICK WHITENING GEL

**Form:** Gel

**Colour:** Clear

**Odour:** Characteristic

|                 | <b>Value</b> | <b>Temperature</b> |
|-----------------|--------------|--------------------|
| pH-value        | 4.5-7.5      |                    |
| Boiling point   | n/a          |                    |
| Vapour pressure | n/a          | 20°C               |

# Safety Data Sheet

According to Regulation (EC) No 1272/2008

Revision 3: 09/06/2021

|                     |                                  |      |

| Density             | 1.150-1.350<br>g/cm <sup>3</sup> | 20°C |
| Solubility in water | Yes                              |      |
| Viscosity           | 40,000-60,000<br>cPs             | 20°C |

## SECTION 10. STABILITY AND REACTIVITY

### **Stability**

Product is stable at room temperature in closed containers under normal storage and handling conditions.

### **Dangerous reactions**

Reacts with various metals

Reacts with reducing agents Reacts with catalysts

Acts as an oxidizing agent on organic materials such as wood, paper and fats

### **Hazardous decomposition products**

Decomposition by combustion, may release oxides of carbon and nitrogen.

## SECTION 11. TOXICOLOGICAL INFORMATION

### *11.1 Information on toxicological effects*

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Inhaled      | The material is not thought to produce adverse health effects or irritation of the respiratory tract. Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Ingestion    | The material has <b>NOT</b> been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroborating animal or human evidence. The material may still be damaging to the health of the individual, following ingestion, especially where pre-existing organ (e.g liver, kidney) damage is evident. Present definitions of harmful or toxic substances are generally based on doses producing mortality rather than those producing morbidity (disease, ill-health). Gastrointestinal tract discomfort may produce nausea and vomiting. In an occupational setting however, ingestion of insignificant quantities is not thought to be cause for concern. |
| Skin contact | Limited evidence exists, or practical experience predicts, that the material either produces inflammation of the skin in a substantial number of individuals following direct contact, and/or produces significant inflammation when applied to the healthy intact skin, for up to four hours, such inflammation                                                                                                                                                                                                                                                                                                                                                                                                         |

# Safety Data Sheet

According to Regulation (EC) No 1272/2008

Revision 3: 09/06/2021

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>being present twenty-four hours or more after the end of the exposure period. Skin irritation may also be present after prolonged or repeated exposure; this may result in a form of contact dermatitis (nonallergic). The dermatitis is often characterised by skin redness (erythema) and swelling (oedema) which may progress to blistering (vesiculation), scaling and thickening of the epidermis. At the microscopic level there may be intercellular oedema of the spongy layer of the skin (spongiosis) and intracellular oedema of the epidermis.</p> <p>Open cuts, abraded or irritated skin should not be exposed to this material</p> <p>Entry into the blood-stream through, for example, cuts, abrasions, puncture wounds or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. <b>IRRITANT</b></p> |
| Eye                  | <p>Evidence exists, or practical experience predicts, that the material may cause eye irritation in a substantial number of individuals and/or may produce significant ocular lesions.</p> <p>Repeated or prolonged eye contact may cause inflammation characterised by temporary redness (similar to windburn) of the conjunctiva (conjunctivitis);</p> <p>Temporary impairment of vision and/or other transient eye damage/ulceration may occur. <b>STRONG IRRITANT WITH DANGER OF SEVERE EYE INJURY</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Chronic              | <p>Limited evidence suggests that repeated or long-term occupational exposure may produce cumulative health effects involving organs or biochemical systems.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Toxicity             | <p>No data available</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## SECTION 12. ECOLOGICAL/ENVIRONMENTAL INFORMATION

Under normal and foreseeable uses, there are no concerns for aquatic organisms exposed to product ingredients at the anticipated environmental concentrations. Relevant environmental data have been reviewed and these indicate that the product is compatible with down-the-drain disposal routes, including municipal wastewater treatment processes and septic tank systems. This product is intended for dispersive use and should not be disposed of directly into the environment.

# Safety Data Sheet

According to Regulation (EC) No 1272/2008

Revision 3: 09/06/2021
